

## Glen Raven Technical Fabrics' GlenGuard brand of AR/FR fabric used to make FR Face Masks

Unprecedented times call for innovative solutions. Workers whose jobs require them to wear arc-rated, flame-resistant (AR/FR) apparel to comply with OSHA 1910.269 and NFPA 70E now face the added threat of COVID-19 contamination on the jobsite – requiring them to wear protective face masks as well. To comply with OSHA standards, these masks must also be AR/FR compliant, yet ordinary masks don't have flame-resistant properties.

GlenGuard 5.3oz fabric is being used to make masks in collaboration with Ariat. GlenGuard is the ideal AR/FR fabric for face masks made to comply with CDC recommendations for cloth face covers because they are woven, lightweight, breathable, and formaldehyde-free.
